Silicone screen printing ink is a kind of ink specially used for printing on the surface of silicone material. It is composed of multiple ingredients, and can form clear, firm and specific performance patterns, text or logos on silicone products through the screen printing process. This kind of ink usually uses silicone resin as the main film-forming substance, has good elasticity, flexibility and weather resistance, can adapt to the various physical properties of silicone materials, can be closely combined with the surface of silicone after printing, and is not easy to fall off, crack or fade. At the same time, it also adds pigments to provide a rich color selection, and various additives to adjust the performance of the ink, such as drying speed, fluidity, viscosity, etc., to meet different printing needs and process requirements.
