The global Silk Fibroin Powder market size is predicted to grow from US\$ 123 million in 2025 to US\$ 272 million in 2032; it is expected to grow at a CAGR of 11.9% from 2026 to 2032.

In 2024, global Silk Fibroin Powder reached approximately 1,008 tons, with an average global market price of around 124.6 USD/kg.

Silk Fibroin Powder is a fine powdered material derived from natural silk fibers, typically obtained through a series of processes including degumming to remove sericin, dissolution of the remaining silk fibroin, purification, and drying. As a natural protein-based product, it retains the excellent biocompatibility, biodegradability, and moisture-retention properties of silk fibroin, with controllable particle sizes and purity levels that can be adjusted according to application requirements, making it a versatile raw material in multiple fields.

Demand for Silk Fibroin Powder is driven by the growing consumer preference for natural, safe, and high-performance ingredients in industries such as biomedicine, cosmetics, and food, as well as the expanding research and application of biodegradable materials. Business opportunities lie in developing high-purity and ultra-fine (nano-grade) products to meet the stringent requirements of biomedical and high-end cosmetic fields, exploring innovative extraction technologies to improve production efficiency and reduce costs, expanding applications in emerging areas such as tissue engineering and sustainable packaging, and strengthening the development of customized solutions tailored to specific industry needs.
