The global Simulated Moving Bed Chromatography System market size is predicted to grow from US$ 608 million in 2025 to US$ 937 million in 2031; it is expected to grow at a CAGR of 7.5% from 2025 to 2031.

The simulated moving bed chromatography system is an efficient continuous separation and purification technology. It achieves countercurrent operation similar to a real moving bed by periodically switching the flow path. It is widely used in the pharmaceutical, food, fine chemical and other industries. It divides the chromatographic column into multiple areas and uses fluid dynamics to optimize the separation process. Compared with traditional batch chromatography, SMB has the advantages of high purity, high yield and low solvent consumption. It is particularly suitable for large-scale industrial production such as chiral drug separation and sugar extraction. With the development of AI optimization, green solvents and continuous manufacturing, SMB technology is evolving towards a more efficient and environmentally friendly direction.

United States market for Simulated Moving Bed Chromatography System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
