The global Single Cell Li-ion Battery Chargers market size is predicted to grow from US\$ 211 million in 2025 to US\$ 279 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

In 2025, global Single Cell Li-ion Battery Chargers production reached approximately 98,200 k units?with an average global market price of around US\$ 2.2 per unit, and a gross profit margin of approximately 10%-30%. Single Cell Li-ion Battery Chargers refer to charging devices or charging circuits specifically designed for one lithium-ion or lithium-polymer cell, typically with a nominal voltage of 3.6V or 3.7V and a full-charge voltage of about 4.2V. These chargers generally use constant-current and constant-voltage charging methods and may include pre-charge, fast charge, thermal regulation, protection, and power-path management functions. They are widely used in portable electronics, wearable devices, battery-powered accessories, toys, medical handhelds, and compact industrial products where small size, charging safety, and battery life are important design considerations.

The industrial chain of Single Cell Li-ion Battery Chargers includes upstream components such as charger ICs, MOSFETs, passive components, PCBs, connectors, cables, housings, displays, and embedded software. The midstream consists of charger design, SMT assembly, firmware programming, charging algorithm tuning, protection circuit integration, and safety testing. Downstream applications mainly include smartphones, wearables, Bluetooth devices, portable medical products, toys, power banks, small consumer electronics, and handheld industrial terminals. The ecosystem also includes OEM integration, aftermarket adapters, testing services, battery pack matching, and certification support to improve charging efficiency, safety, compactness, and product reliability across one-cell battery-powered devices.

China's policy on lithium-ion batteries mainly focuses on lithium-ion batteries. In 2015, in order to strengthen the management of lithium-ion battery industry and improve the development level of the industry, China formulated the Standard of Lithium-ion Battery Industry. the global sales of new energy vehicles reached 10.8 million units in 2022, with a year-on-year increase of 61.6%. In 2022, China new energy vehicle sales reached 6.8 million units, and the global share increased to 63.6%. In Q4 2022, sales penetration rate of China's new energy vehicle reached 27%, while the global average penetration rate was only 15%. Europe penetration was 19%, and North America penetration rate was only 6%. Lithium batteries will fully benefit from the high growth of downstream demand. According to the Ministry of Industry and Information Technology, China's lithium-ion battery production reached 750 GWh in 2022, up more than 130 percent year on year. Among them, the output of lithium energy storage battery exceeded 100 GWh, and the total output value of the industry exceeded 1.2 trillion yuan. The industrial application of lithium battery was also growing rapidly. In 2022, the loading capacity of new energy vehicle power battery was about 295 GWh, and the new energy vehicle power battery was about 295 GWh. According to our research, in 2022, the overall global lithium-ion battery shipments were 957GWh, a year-on-year increase of 70%. Global vehicle power battery (EV LIB) shipments were 684GWh, a year-on-year increase of 84%; Energy storage battery (ESS LIB) shipments were 159.3GWh, a year-on-year increase of 140%.
