The global Single-chip Radar Soc market size is predicted to grow from US\$ 411 million in 2025 to US\$ 1555 million in 2032; it is expected to grow at a CAGR of 21.1% from 2026 to 2032.

Single-chip Radar SoC is a highly integrated radar system-on-chip that combines RF front-end circuits, digital signal processing, and microcontroller functions on a single CMOS die, enabling compact architecture, low power consumption, and consistent signal performance for angle radar and forward radar. In 2025, production was approximately 9.33 million units and the average price was USD 45 per unit. The industry's capacity utilization rate in 2025 was about 60% and the average gross margin was around 55%. Upstream, the most critical inputs include silicon wafers, photoresists, lithography machines, and etching tools, with representative suppliers such as ASML, Tokyo Electron, and Applied Materials providing essential semiconductor equipment and materials. The midstream segment includes system architecture design, RF front-end and baseband integration, digital signal processing algorithms, mixed-signal verification, and SoC-level functional integration, which together define computational capability, radar performance, and integration level. Downstream, Single-chip Radar SoC is used by angle radar and forward radar manufacturers such as Bosch, Continental, Aptiv, Valeo, Denso, ZF, and Huawei.

In the process of the evolution of automobiles to a higher level of intelligence, traditional millimeter-wave radars can no longer meet the needs. Its perception information only contains distance and orientation, lacking height parameters, and cannot form high-density point cloud imaging, which makes it difficult to identify road targets. Although lidar with high-density point cloud imaging capability can solve the pain points of traditional millimeter-wave radar, the cost of lidar on the car is high, and there are

natural defects that cannot work around the clock. Therefore, 4D imaging radar has attracted the attention of the industry.
