The global Single-phase Shaded Pole Motor market size is predicted to grow from US$ 870 million in 2025 to US$ 1256 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Shaded Pole Motor is one of the single-phase AC motors, which usually adopts cage-type inclined slot cast aluminum rotor. The rotor group is mainly composed of cast aluminum rotor, shaft, thrust washer to prevent the rotor from moving forward and backward, and gasket to adjust the movement. Stator group is mainly composed of short circuit ring and main stator core. The wire package assembly is mainly composed of coil, framework, lead wire or thermal protector and relevant insulation binding materials. The advantages of the shaded pole motor are its simple structure, no additional windings and capacitors, and its disadvantages are low efficiency and large slip. The drainage pump used by the air conditioner embedded machine is a typical shaded pole motor with low defect rate. The general fault is that the motor is dirty and blocked.
