The global Sodium-air Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Sodium-air Battery, also known as a sodium-oxygen battery or sodium-air fuel cell, is a type of rechargeable battery that utilizes the reaction between sodium and oxygen to store and release electrical energy. It is a variation of metal-air batteries, where the metal (in this case, sodium) acts as the anode and oxygen from the air serves as the active cathode material.

The market potential of Sodium-air Battery mainly comes from its high energy density and renewability. High energy density means that Sodium-air Battery can provide longer battery life or store more energy, which is suitable for applications requiring high energy output, such as electric vehicles, renewable energy storage and mobile devices. In addition, Sodium-air Battery uses the reaction of oxygen and sodium, which can achieve sustainable recycling by adding new sodium supply, reducing dependence on limited resources.
