The global Stainless Steel Polishing Paste market size is predicted to grow from US\$ 2192 million in 2025 to US\$ 3453 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global sales of stainless steel polishing paste reached 800,000 tons, with an average selling price of US\$2,800 per ton. Stainless steel polishing paste is a surface finishing material made from abrasives such as alumina, combined with wax-based or grease-based carriers and functional additives. It is used for mirror polishing and scratch removal of stainless steel products. Upstream raw materials mainly include alumina abrasives, paraffin wax and animal and vegetable oils, surfactants, and a small amount of resin additives. Downstream supplies mainly go to stainless steel sheet and strip processing plants, home appliance manufacturers, building decoration companies, automotive parts manufacturers, and kitchen and bathroom product manufacturers. The global total production capacity is approximately 1 million tons per year. The gross profit margin is approximately 28%. Downstream consumption is comprised of 35% in the home appliance sector, 30% in building decoration, 20% in automobiles and equipment, and 15% in other sectors. On a per-ton basis, the production of 1 ton of product consumes approximately 0.35 tons of alumina, 0.45 tons of base material, and 0.05 tons of additives. The remainder is energy consumption and losses. Demand is driven by the expansion of stainless steel applications, the increase in the proportion of high-end appearance parts, and the popularization of automated polishing lines. The future path lies in developing low-dust, environmentally friendly, water-based formulas and high-efficiency, long-life products, and penetrating high-end manufacturing customers through customized services, bringing continuous business opportunities and large-scale growth.

The stainless steel polishing paste market is currently experiencing steady growth, primarily driven by the expanding applications of stainless steel products and increasing demand for high-end surface finishing. Home appliances, building decoration, kitchen and bathroom products, automobiles, and high-end equipment manufacturing are the main downstream sectors. Particularly in high-end home appliances and stainless steel kitchenware, the increasing demands for mirror-like shine, wear resistance, and environmental performance are driving the upgrading of polishing pastes towards low dust, low VOC, water-based, and high-efficiency formulations.

Simultaneously, the widespread adoption of automated polishing production lines has increased the consumption per unit of production capacity, leading to a gradual increase in industry concentration. Leading domestic and international companies are gaining an advantage through product innovation and customized services.

It is projected that over the next five years, high-performance, environmentally friendly, and professionally customized products will become the focus of competition, providing companies with opportunities for differentiated competition and market expansion.
