The global Steel CNC Locking Milling Machine market size is predicted to grow from US$ 720 million in 2025 to US$ 1016 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

The steel CNC locking milling machine is a high-precision CNC milling machine specially used for machining the locking (or locking interface) of steel parts. It integrates an advanced CNC system and a high-rigidity machine tool structure, and is mainly used to process various locking structures, keyways or positioning grooves on steel parts to ensure that the parts can be accurately docked and firmly fixed during assembly. This type of equipment is often used in the fields of automobiles, construction machinery, heavy equipment and mold manufacturing. Through programmed control, it can realize the locking processing of complex geometric shapes, improve processing efficiency and product consistency, and reduce human errors and subsequent assembly costs.
