## Abstracts

The global Sterculia lychnophora Extract market size is predicted to grow from US\$ 33.28 million in 2025 to US\$ 52.43 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, the global production of Sterculia lychnophora extract was approximately 1,260 tons, with an average selling price of approximately US\$27 per kilogram. The production capacity in 2025 was 1,480 tons, with an average gross profit margin of approximately 15-25%. Sterculia lychnophora extract is derived from the mature seeds of the Sterculia lychnophora plant (a member of the Malvaceae family), containing various pharmacologically active substances. Its main components include polysaccharides, mucilage, and the active ingredient sterculin. It has the effects of clearing lung heat, relieving sore throat and hoarseness, and promoting bowel movements, and is mainly used to alleviate symptoms such as sore throat caused by lung heat, hoarseness, and constipation due to heat accumulation.

The upstream raw materials for Sterculia lychnophora extract are mainly the dried mature seeds of Sterculia lychnophora, whose core value lies in the polysaccharides, flavonoids, and fatty acids contained in the seeds. Downstream applications are mainly concentrated in the traditional food and health product sectors, where it serves as a core functional ingredient in products such as throat lozenges, health teas, solid beverages, and instant drinks. Its market is closely linked to the traditional perception of its 'lung-moistening and throat-soothing' efficacy and modern clean label trends.

Sterculia lychnophora extract, a traditional Chinese herbal ingredient, has gained increasing attention in the global natural health products and pharmaceutical markets in recent years. Widely used in traditional Chinese medicine, Sterculia lychnophora

possesses multiple benefits, including soothing the throat, clearing the lungs, relieving coughs, and reducing inflammation. Therefore, the demand for its extract in health supplements, functional foods, traditional medicines, and cosmetics continues to grow. With increasing consumer health awareness, particularly in the Asian, European, and North American markets, the demand for natural herbal products is expanding, giving Sterculia lychnophora extract a very promising market outlook.

In terms of applications, Sterculia lychnophora extract is primarily used in health products to alleviate respiratory diseases, soothe the lungs and relieve coughs, and provide antibacterial and antioxidant effects. It is widely used in cough relief and immune support products. Furthermore, it is also favored in the cosmetics industry as a natural anti-inflammatory and antioxidant ingredient, often added to skincare and anti-aging products. With the globalization of traditional Chinese medicine culture and the popularity of natural herbal products, the application of Sterculia lychnophora extract will further expand globally.
