Swine autogenous vaccines are vaccines prepared using pathogen isolates from pig herds themselves, targeting specific pathogens or diseases in pig farms. The production process of these vaccines typically includes isolating pathogens from sick pigs, purifying and culturing them, and preparing vaccine antigens. Swine autogenous vaccines offer high degrees of specificity and adaptability, enabling more effective responses to specific disease issues in pig farms. Since the vaccine antigens are derived from pathogens within the pig herd, swine autogenous vaccines have unique advantages in stimulating the immune response of pigs, providing more effective immune protection.
