The global Thermal Insulation Board market size is predicted to grow from US\$ 32370 million in 2025 to US\$ 46230 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Thermal Laminate Board is typically constructed by combining plasterboard with insulating solid foam and paper facing. It provides excellent thermal insulation in homes and commercial buildings. It is often installed in internal walls, ceilings, roofs and decks.

Europe has been one of the mature markets, it's predicted to remain a major market for building thermal insulation board by 2029. Burgeoning residential and commercial construction activities in North America, coupled with the implementation of strict green building codes to reduce the energy consumption per structure are expected to aid growth. Furthermore, favorable government regulations for the adoption of the product for residential as well as commercial structures are expected to boost the growth over the forecast period. The Asia Pacific region is expected to exhibit the highest growth during the forecast period, owing to the rising construction activities in the region to cater to the requirements of a growing population. China is estimated to account for the largest share in the region, owing to the various government initiatives to improve its public infrastructure. Political and economic instability in Central and South America is expected to harm the regional building thermal insulation board industry growth.
