In 2025, global three-finger gripper production reached approximately 5.31 million, with an average global market price of around US\$ 100 per unit. In 2025, the global 's total production capacity of three-finger gripper reached 9.11 million. The industry average gross profit margin of this product reached 62%.

A three-finger gripper is a robot end effector that mimics the grasping action of human fingers. It usually has three 'fingers' that move independently or collaboratively, and are opened and closed by pneumatic, electric or hydraulic drive to adapt to the grasping of objects of different shapes, sizes and materials.

The upstream industry chain for three-finger grippers primarily includes suppliers of core components (such as motors, cylinders, sensors, and control systems) in pneumatic, electric, and hydraulic applications. Midstream is comprised of manufacturers and integrators specializing in multi-finger adaptive end effectors, such as Robotiq, Schmalz, and Soft Robotics. These companies integrate upstream components and develop high-precision, complex-object-adaptable gripping solutions. Downstream, these grippers are widely used in industries such as automotive, semiconductors and electronics, and pharmaceuticals, which demand flexible and adaptive gripping. This industry chain has relatively high technical barriers, emphasizing collaboration and adaptability.
