The global Thrombocyte Shakers market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A thrombocyte shaker prevents the clumping of stationery platelets in blood by providing a constant, gentle, reciprocating action which continually mixes platelets inside platelet bags. To keep platelets well oxygenated and at a constant temperature platelet shakers have perforated drawers to allow air to circulate.
