The global Trichosanthes Fruit Extract market size is predicted to grow from US\$ 20.82 million in 2025 to US\$ 30.85 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, the global production of Trichosanthes Fruit Extract is approximately 560 tons, with an average selling price of about US\$38 per kilogram. The production capacity in 2025 is 740 tons, with an average gross profit margin of approximately 15-25%.

Trichosanthes Fruit Extract is a mixture of active ingredients extracted from the mature fruits, peels, and seeds of the Trichosanthes kirilowii plant (a member of the Cucurbitaceae family). It mainly contains triterpene saponins, flavonoids, and organic acids. It is cold in nature, sweet and slightly bitter in taste, and is used in traditional Chinese medicine to clear heat and resolve phlegm, relieve chest tightness and disperse stagnation, and moisten the intestines. It can treat coughs due to lung heat, chest tightness and heart pain, and constipation. In modern medicine, it is used for coronary heart disease, mastitis, and constipation.

The core upstream raw materials for Trichosanthes Fruit Extract are the dried mature fruits, peels, or seeds of the Trichosanthes kirilowii plant, specifically divided into three main medicinal parts: whole Trichosanthes kirilowii, Trichosanthes kirilowii peel, and Trichosanthes kirilowii kernel. The content and efficacy of its active ingredients are directly affected by the origin and processing methods. Downstream applications are highly concentrated in traditional Chinese medicine preparations and herbal granules for cough relief and chest regulation. It also has preliminary applications in health foods targeting cardiovascular and lung health, and is used as a functional ingredient in animal feed additives. This is a niche market primarily driven by traditional Chinese medicine theory, with exploration in specific modern health fields.

Trichosanthes fruit extract, derived from the traditional Chinese medicinal herb Trichosanthes, is widely used in traditional Chinese medicine for treating conditions such as clearing heat and resolving phlegm, moistening the lungs and relieving cough, and reducing inflammation. With the rising global demand for natural plant extracts, the market for Trichosanthes fruit extract is gradually expanding. Particularly in the fields of health supplements, functional foods, cosmetics, and traditional Chinese medicine, Trichosanthes fruit extract is gaining attention from consumers and manufacturers due to its rich pharmacological properties.

In the health supplement sector, Trichosanthes fruit extract is commonly used in products with functions such as moistening the lungs, relieving cough, and clearing heat, making it particularly suitable for addressing climate changes and respiratory problems during the autumn and winter seasons. With the increasing demand for natural plant-based therapies and immune support products, the market potential for Trichosanthes fruit extract is continuously expanding. Furthermore, due to its antioxidant and anti-inflammatory effects, Trichosanthes fruit extract is also beginning to be used in the cosmetics industry as a natural ingredient in skincare products to improve skin health.

However, market challenges include the need for further research on the efficacy and safety of Trichosanthes fruit extract, as well as the stability of raw material supply. Nevertheless, with the growing consumer interest in natural and herbal health products, the market for Trichosanthes fruit extract is expected to continue expanding, especially in the Asia-Pacific and North American markets, becoming an increasingly important natural health ingredient.
