Two-way Automotive Anti-explosion Valve is a safety device specifically designed for electric vehicle (EV) battery systems. It automatically releases gas when internal pressure rises abnormally to prevent casing rupture or explosion, while also allowing air intake when external pressure drops too low to avoid battery pack deformation or damage. Utilizing high-precision pressure-balancing technology, it ensures safe battery operation under extreme conditions. As the electric vehicle market rapidly expands, battery safety has become a key industry focus. The two-way anti-explosion valve plays a crucial role in preventing thermal runaway, optimizing battery sealing, and enhancing overall vehicle safety, with increasing market demand.
