The global Undercarriage Parts market size is predicted to grow from US\$ 4264 million in 2025 to US\$ 6719 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global Undercarriage Parts reached approximately 18,274.2 K units, with an average global market price of around 238.5 USD/unit.

Undercarriage Parts refer to the core component assembly that constitutes the locomotion and support system of tracked or wheeled equipment, mainly including tracks, driving wheels, idlers, road wheels, track frames, suspension components (such as torsion bars, hydraulic shock absorbers), bushings, pins, and roller bearings. These parts work together to transmit power, bear the overall weight of the equipment, ensure stable movement on complex terrains, and mitigate the impact of ground unevenness, serving as essential components that directly affect the equipment's reliability, maneuverability, and service life.

Demand for Undercarriage Parts is primarily driven by the large-scale global stock of construction machinery, agricultural equipment, and military vehicles, the high wear rate of undercarriage components in harsh operating environments (such as mines, construction sites, and farmland), and the continuous expansion of infrastructure construction and agricultural mechanization. Business opportunities lie in the R&D and production of high-wear-resistant, corrosion-resistant, and lightweight components (using materials like alloy steel and composite materials), the development of cost-effective aftermarket replacement parts for mainstream equipment models, the layout of intelligent maintenance services (such as predictive maintenance based on component wear monitoring), and the exploration of emerging markets with growing demand for construction and agricultural machinery.
