Abstracts

The global Underground Combined Transformer market size is predicted to grow from US\$ 714 million in 2025 to US\$ 897 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2025, global production of underground combined transformers reached 20,861 units, with an average selling price of \$35,000 per unit. In 2025, the global production capacity of underground combined transformers was approximately 30,000 units, and the gross margin was about 27.2%. An underground combined transformer is a power device that integrates transformers and other distribution equipment (such as high-voltage switchgear, low-voltage distribution devices, etc.) into a sealed enclosure that can be buried underground. The main purpose of this design is to save ground space and reduce the impact on the surrounding environment. The upstream of underground combined transformers includes magnetic materials, conductive and winding materials, and insulation and dielectric materials. The midstream consists of underground combined transformer manufacturers, while the downstream is mainly applied in industrial parks, airports, shopping malls, and other places.

Currently, the market for underground combined transformers is in a steady growth phase, driven primarily by tight urban land resources, increasing demand for landscape aesthetics, and higher requirements for power supply reliability. Because these devices effectively save ground space and reduce visual and noise pollution, they are being increasingly adopted in scenarios such as commercial complexes, transportation hubs, and industrial parks. At the same time, the industry is moving toward miniaturization, higher protection ratings, and intelligent monitoring to address challenges like underground humidity, heat dissipation, and maintenance difficulties. Overall, market demand continues to expand, with product standardization and customization

developing in parallel; however, installation costs and post-installation maintenance remain important factors limiting large-scale deployment.
