Urban rail transit wheelset is the part of the locomotive that is in contact with the rail, which is composed of two wheels on the left and right firmly pressed on the same axle. The function of the wheelset is to ensure the operation and steering of the locomotive on the rail, bear all the static and dynamic loads from the rolling stock, transmit it to the rail, and transmit the load generated by the uneven line to the parts of the rolling stock.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
