The vertical worm gear reducer is a mechanical transmission device used to reduce the speed and increase the torque. It is characterized by a vertical arrangement of the input shaft and the output shaft, a compact structure, and is suitable for installation environments with limited space. The worm gear reducer achieves transmission through the meshing of the worm and the worm wheel. It has the advantages of smooth transmission, low noise, and strong self-locking. It is widely used in lifting equipment, conveying machinery, food processing, packaging machinery and other fields. The vertical design makes it particularly suitable for vertical transmission scenarios, such as mixers, elevators, etc.
