The global Water Cooling Liquid market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The driving factors for the development of water cooling liquids mainly include the following points:

High heat dissipation: Water cooling liquid has strong thermal conductivity, which can absorb and transfer the heat of the chip more effectively, reduce the chip temperature, improve the reliability and stability of the equipment, and further reduce energy consumption.

Low noise: Water-cooling technology can reduce the speed of cooling equipment, and can even adopt a fanless design, thereby greatly reducing noise and improving the comfort of the operation and maintenance environment.

Low cost: Although the initial investment of the water cooling system is relatively high, its energy saving effect is significant, the overall efficiency of the data center is greatly improved, and the overall operating cost can be reduced.

High efficiency: Water cooling liquid technology can operate at high power density, making the equipment layout more compact, improving the available space and overall efficiency of the data center.

Environmental adaptability: The water cooling liquid system does not produce any

harmful substances during operation, is environmentally friendly and has strong adaptability.
