The wedge-shaped hollow paddle dryer is a drying equipment that uses hollow wedge-shaped paddles for efficient indirect heating. Steam, heat transfer oil or hot water is introduced into the internal paddles and the barrel jacket to heat the material by conduction. At the same time, the rotating motion of the paddles continuously turns and stirs the material, improving the heat transfer efficiency and preventing agglomeration. The equipment has the characteristics of low energy consumption, uniform heating of materials, and less dust. It is widely used in the drying of low-temperature or heat-sensitive materials in the chemical, food, pharmaceutical, sludge treatment and environmental protection industries.
