## Abstracts

The global Wireless M-Bus Module market size is predicted to grow from US$ 1151 million in 2025 to US$ 2004 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

A Wireless M-Bus Module is a low-power wireless communication module based on the Wireless M-Bus (EN 13757) protocol, commonly used for smart metering, utility monitoring, and IoT telemetry applications. In 2024, the average global market price of a Wireless M-Bus Module is around US$30 per unit, and global production reached approximately 34 million units. The industry typically maintains a gross margin of 28%?42%, driven by RF design complexity, firmware optimization, certification costs and integration value. The supply chain includes upstream RF chipsets, microcontrollers, antennas, crystals, PCB materials and power ICs; midstream manufacturers perform RF design, module assembly, firmware development, testing, calibration and certification; downstream customers include smart meter companies, utility automation providers, IoT integrators and industrial monitoring equipment manufacturers.

The market trend for Wireless M-Bus (Meter-Bus) modules is experiencing significant growth. This can be attributed to several factors:Increasing adoption of smart metering solutions: The demand for smart metering solutions is growing globally, driven by the need for accurate and efficient metering of utility resources such as electricity, gas, and water. Wireless M-Bus modules enable wireless communication between smart meters and data collection systems, allowing for remote monitoring and management of utility consumption. The increasing adoption of smart metering solutions in residential, commercial, and industrial sectors is driving the demand for Wireless M-Bus modules.
