Some of the 3D Food Printing companies profiled in this report include TNO, 3D Systems, byFlow, Natural Machines, Systems And Materials Research Corporation, Beehex, Choc Edge, Modern Meadow, Nu Food, and North branch Everbright.

Lucintel forecasts that commercial will remain the largest vertical segment over the forecast period due to increased demand for customized cakes and bakery items by consumers.

Within this market, carbohydrates will remain the largest ingredient segment over the forecast period due to increasing consumer requirment for high-carbohydrate and low-protein diet.

North America will remain the largest region, and it is also expected to witness the highest growth over the forecast period due to the huge market for confectioneries and bakery products, increased demand for customized food products, and capability of 3D food printers to print soft, chewable food for the geriatric population.

Features of the Global 3D Food Printing Market

Market Size Estimates: Global 3D food printing market size estimation in terms of value ($M) shipment.

Trend and Forecast Analysis: Market trends (2014-2019) and forecast (2020-2025) by various segments.

Segmentation Analysis: Global 3D food printing market size by various segments, such as ingredient and vertical in terms of value.

Regional Analysis: Global 3D food printing market breakdown by North America, Europe, Asia Pacific, and Rest of the World.

Growth Opportunities: Analysis of growth opportunities in different ingredient, vertical, and region for the global 3D food printing market.

Strategic Analysis: This includes M&A, new product development, and competitive landscape of the global 3D food printing market.

Analysis of competitive intensity of the industry based on Porter's Five Forces model.

This report answers following key questions

Q.1 What are some of the most promising potential, high-growth opportunities for the global 3D food printing market by ingredient (dough, fruits and vegetables, proteins, sauces, dairy products, and carbohydrates), vertical (governments, commercial, and residential), and region (North America, Europe, Asia Pacific, and Rest of the World)?
Q.2 Which segments will grow at a faster pace and why?
Q.3 Which region will grow at a faster pace and why?
Q.4 What are the key factors affecting market dynamics? What are the drivers and challenges of the global 3D food printing market?
Q.5 What are the business risks and threats to the global 3D food printing market?
Q.6 What are the emerging trends in this 3D food printing market and the reasons behind them?
Q.7 What are some changing demands of customers in this 3D food printing market?
Q.8 What are the new developments in this 3D food printing market? Which companies are leading these developments?
Q.9 Who are the major players in this 3D food printing market? What strategic initiatives are being implemented by key players for business growth?
Q.10 What are some of the competitive products and processes in this 3D food printing market, and how big of a threat do they pose for loss of market share via material or product substitution?
Q.11 What M&A activities did take place in the last five years in the global 3D food printing market?
