The future of the global automotive camera market looks promising with opportunities in the markets of compact cars, large cars, and light commercial vehicles. The global automotive camera market is expected to reach an estimated \$7.5 billion by 2023 with a CAGR of 24.3% from 2018 to 2023. The major drivers for this market are growing demand for advanced driver assistance systems in cars with increasing focus on connected vehicle features, and mandatory government regulations to have a rearview backup camera installed in every vehicle in North America and Europe. The National Highway Transportation Safety Administration (NHTSA) has made it mandatory for all vehicles to install a backup camera system by 2019 due to increase in the number of accidents and injuries in the United States.

Emerging trends, which have a direct impact on the dynamics of the automotive camera by industry, include the introduction of recognition camera technology that results in mirrorless cars and the increased usage of wide angle camera technology.

A total of 171 figures/charts and 143 tables are provided in this 261 -page report to help in your business decisions. Sample figures with some insights are shown below.
