Starch based will remain the largest feedstock over the forecast period because of the high production of corn and corn is the most widely used starch-based feedstock for bioethanol production, owing to its large-scale availability.

Transportation will remain the largest end use industry during the forecast period because bioethanol is considered as an alternative fuel in vehicles, and it also reduces the crude oil dependency for some countries.

North America will remain the largest region over the forecast period due to stringent government regulations on clean energy, the presence of a large number of manufacturing companies in the US and Canada, and growth in corn based bioethanol in the region.

Some of the bioethanol companies profiled in this report include Archer Daniels Midland, POET LLC, Green Plains, Valero Energy Corporation, Tereos, Flint Hill Resources, and Raizen
