Calcium Nitrate Market Insights

Lucintel forecasts that liquid will remain the largest product type segment over the forecast period due to the increasing need of waste water treatment facilities, rise in trends for implementing eco-friendly fertilizer methods, and the escalating demand for food across the world.

Within this market, fertilizers are expected to remain the largest application segment because calcium nitrate is widely used in agriculture as a fertilizer ingredient, and wider applications in horticulture as it improves fruit quality and is less sensitive to bitter pit and blossom end rot and shelf-life.

APAC will remain the largest region due to the rising demand for fertilizers in agriculture and growing application in waste water treatment facilities in developing countries, like China, Japan, and India.
