Abstracts

Despite the Euro crisis and other challenges to its economy, China is expected to witness a good growth rate in its GDP during the forecast period of 2012-2017 and surpass the US in GDP by 2020. The nation's extreme dependence on export, social risk of increasing dependency ratio, rising inequalities of income and class, and potential mass unrest poses challenges for the ruling party; however, the huge domestic market and expanding international trade is expected to boost the growth momentum over the forecast period.

Lucintel, a leading global management consulting and market research firm, has analyzed the Chinese economy and presents its findings in "China Country Analysis 2012-2017: An Evaluation of Political, Social, Economic, and Business Risk."

As per the study, foreign direct investment (FDI) has proven to be the driving force for the economic growth of China. Successive governments' focus on reform processes and simplification of tax law and FDI procedure makes China an ideal destination for investment and growth. Large-scale production diminishes production costs, leading to exports that are less expensive. China's strong presence as an export platform has contributed to incomes and employment throughout its economy.

Lack of legal protection for investors and intellectual property rights, inconsistent application of regulations, burdensome bureaucracy, and corruption are the major risks that can hinder the economic growth of China. The low external debts, high foreign exchange reserves, strong balance of payments, and surplus current account balance make China a low default risk.

Lucintel's research indicates that China faces acute challenges of environmental concerns and resources pressures. China is the world's largest emitter of greenhouse gases from burning fossil fuels, but new incentives by the government will increase its international competitiveness through innovation and technological development. Lucintel's research provides a concise overview of the risk analysis for doing business in China. This report studies the political, economic, social, technological, and business risk analysis of china.

This unique report from Lucintel will provide you with valuable information, insights, and tools needed to identify new growth opportunities and operate your business successfully in this market. This report will save hundreds of hours of your own personal research time and will significantly benefit you in expanding your business in this market. In today's stringent economy, you need every advantage that you can find.

Features of This Report:

To make business, investment, and strategic decisions, you need timely, useful information. This market report fulfills this core need and is an indispensable reference guide for multinational materials suppliers, product manufacturers, investors, executives, distributors, and many more that operate in this market.
