Cured-In-Place Pipe Consumption Market Insights

Lucintel forecasts that polyester will remain the largest segment over the forecast period due to their low cost, high electricity, and chemical resistance.

Within this market, water pipeline rehabilitation will remain the largest segment because the water pipelines represent a vast and vital infrastructure across the globe, and this extensive network is often old and prone to deterioration.

North America is expected to witness highest growth over the forecast period due to aged infrastructure and the need for pipeline rehabilitation, as well as stringent environmental rules, government efforts, and infrastructure development investments.
