Lucintel forecasts that pasteurizers will remain the largest type segment over the forecast period, as pasteurization involves heat treatment processes and exposure to very low temperatures simultaneously, which kills the harmful microorganisms and also inactivate the dormant disease-causing spores if present.

Within this market, processed milk will remain the largest application segment over the forecast period due to growth in income and population and increasing demand for milk that can be stored for longer time without being affected by harmful micro-organisms.

Asia Pacific will remain the largest region, and it is also expected to witness the highest growth over the forecast period because the governments have favorable government policies to support the growth and development of the dairy industry in Japan and Korea. Growing demand for flavored milk in this region, India being the largest producer of milk in the world, contributes to the growth of the region.
