Some of the formaldehyde companies profiled in this report include BASF SE, Bayer Crop Science, Celanese AG, Dynea AS, Foremark Performance Chemicals, Georgia-Pacific Chemicals LLC, Huntsman International LLC. In this market, Urea Formaldehyde (UF) resins, Phenol-Formaldehyde (PF) resins, MF resins, polyacetal resins, 1,4-butanediol, pentaerythritol, and methylenebis are the major derivative types. Lucintel forecasts that phenol-formaldehyde (PF) resins will remain the largest segment over the forecast period because of its high demand and consumption rate for laminate, plywood, and wood processing.

Within this market, fibers, solvents, plasticizers, drying agents, resins, and other chemical intermediaries are the major application of formaldehyde. Resin will remain the largest segment by application type over the forecast period because formaldehyde-based resins are used in the textile industry to help binding of dyes and pigments to fabrics and prevent colors from running when clothes are washed.

Asia-Pacific is expected to witness the highest growth over the forecast period because of the growing population, expanding middle class, and increasing disposable income of consumers across the region is expected to drive the building & construction sector.
