Within the glass fiber reinforced plastic market, injection molding, hand layup, compression molding, spray up, filament winding, resin infusion, and prepreg layup are some of the major processes utilized to manufacture composite parts. Injection molding is expected to be the largest process in terms of value and volume in composite manufacturing because of low cycle time, low manufacturing cost, and ability to make complex shapes.

Within glass fiber reinforced plastic market, transportation will remain the largest market by value and volume and it is also expected to witness the highest growth over the forecast period. Government regulations, such as CAFE Standards in the US and carbon emission targets in Europe, are putting pressure on OEMs to incorporate lightweight materials to curb the overall vehicle weight, and this is the key driver for glass fiber in the transportation industry.

Asia Pacific is expected to remain the largest region by value and volume and it is also expected to experience the highest growth over the forecast period because of growth in construction, transportation, and the electrical and electronics segments. Growing economy, growth in population, and urbanization are the major forces that drive the construction segment, especially in China and India.
