Lucintel, a leading global management consulting and market research firm, has analyzed the Global Fungicides market and presents its findings in -Global Fungicides Industry 2012-2017: Trends, Profit, and Forecast Analysis.

The fungicides market consists of a specific type of pesticide that controls fungal disease by specifically inhibiting or killing the fungus causing the disease in the crops. Fungicides prevent and cure diseases, which can have severe adverse effects on crop yields and quality. The main markets are fruit and vegetables, cereals, and rice.

As per the study, regulatory norms to reduce toxicity, environmental laws and government regulations are some of the challenges before the industry. On the contrary, the ever increasing world population has been creating constant pressure for higher yields from the limited cultivable land resources to meet the world hunger, so the demand for fungicides is expected to increase to save crops from the damage caused

by fungus and diseases.

In global fungicides market, APAC is forecast to see the highest growth during next five years. Developing countries such as China and India are demanding higher volumes of nutritious food, which will in turn increase the fungicides market. Growing horticulture and floriculture industries will also result in increasing demand for fungicides. Lucintel's research provides a concise overview of the global fungicides market.
