Abstracts

The future of the global aerospace radome market looks good with opportunities in the commercial aircraft, regional aircraft, general aviation, helicopter, and military aircraft segments. The global aerospace radome market is expected to reach an estimated \$441.3 million by 2021 and it is forecast to grow at a CAGR of 3.6% by value from 2016 to 2021. The major drivers of growth for this market are increase in aircraft delivery and introduction of new aircraft programs.

In this market, major segments include commercial aircraft, regional aircraft, general aviation, helicopter, and military aircraft. On the basis of its comprehensive research, Lucintel forecast that the military aircraft radome segment is likely to experience the highest growth during the forecast period.

Within the aerospace radome market, nose radome is expected to remain the largest market by product type over the forecast period as all the type of aircraft has a nose radome. For business expansion, this Lucintel report suggests innovation and new product development to manufacture radomes that support K, Ka and Ku tri bands for better inflight entertainment and communication. The report further suggests development of partnerships with customers to create win-win situations and development of cost effective solutions for customers.

This unique report from Lucintel will provide you with valuable information, insights, and tools needed to identify new growth opportunities and operate your business successfully in this market. This report will save hundreds of hours of your own personal research time and will significantly benefit you in expanding your business in this market. In today's challenging economy, you need every advantage that you can find.
