On the basis of comprehensive research, Lucintel forecasts that metal LPG cylinder will remain the largest segment. Lower cost as compared to composite cylinders and low penetration of gas pipeline network in developing countries are likely to drive the demand for this segment over the forecast period. The composite cylinder segment is expected to witness the highest growth during the forecast period supported by lightweight, and its non-corrosive properties.

LPG cylinders are used in carrying gas for household will remain the largest segment and it is also expected to witness highest growth during the forecast period. Increasing use of liquefied petroleum gas as a fuel for cooking and unavailability of gas pipeline network are driving growth of this segment over the forecast period.

APAC is expected to remain the largest market and it is also expected to witness the highest growth over the forecast period due to LPG being the major source of cooking fuel in most of the countries and the lack of infrastructure for piped natural gas in this region.
