Global primary and secondary battery markets are expected to grow considerably due to rapid industrialization, GDP and economic growth in most of the developing and emerging nations. The recovery plans of most of the nations from the recent economic slowdown have given impetus to industrialization, thereby giving increased demand for batteries across the global markets. Tremendous growth opportunity exists for batteries in developing economies such as India and China on account of their higher GDP growth rates.

The demand for the secondary battery is expected to outperform the primary battery as the whole world is moving ahead towards rechargeable devices such as cell phones, digital cameras, portable entertainment devices, computing devices and electronic automobiles.

The growing market for the automobile sector indicates a good potential for the secondary batteries. In China, the automobile sector is considerably growing and thus it is expected that the China would generate a good demand for batteries in the near future. At present, China and U.S. are two major economies having highest market share in the global battery market.
