Abstracts

The European construction market for composites applications witnessed decline during the last five years due to the decline in the residential construction market, weak GDP, and decreased penetration. The market is expected to recover over the next five years and composite raw material shipment in the European construction market is expected to reach \$512 million by 2018. A moderate share of this increase can be attributed to the rising cost of raw materials which increase the need at some point, to pass a portion of these costs to the end consumers or risk raising prices in a marketplace with markedly high competition. Lucintel, a leading global management consulting and market research firm, has conducted a competitive analysis on the of the European construction market and has just published a comprehensive research report entitled "Opportunities for Composites in the European Construction Market 2013-2018: Trends, Forecast, and Opportunity Analysis."

According to Lucintel, applications such as FRP panel, bathtub, door, swimming pool, and rebar will drive the growth for composites during the forecast period. Much of the growth in these markets can be attributed to increasing energy efficiency requirements from consumers (doors, windows), escalating need for anti-corrosive applications (rebar, bridge deck) and greater focus on total lifecycle cost of end products as compared to those manufactured from materials such as steel and aluminum (utility poles).

The composites industry in European construction will continue to remain as one of the largest users of commodity grade unsaturated polyester resin and glass fiber in Europe despite the slowdown in 2012. This combination of polyester resin and glass fiber along with commonly used fillers will constitute greater than 97% of all raw materials used by

volume as specific materials (such as carbon fiber, epoxy, vinyl ester, and polyurethane) are continuing to have little on the European construction market. For the next five years, the bath industry (showers, spas, whirlpools, spas, and traditional bath tubs) will remain the largest single purchaser of raw materials in the construction market. However, during the period the bath market will be stable relative to other faster growing markets including swimming pool.

This research report contains market size estimates for the top 12 composite applications in the European construction market, Porter's five forces analysis for composites opportunities in the market, competitive analysis for various applications, trends and forecast for composites applications, growth drivers and many other elements, all of which can help you make confident business decisions in this globally competitive marketplace.

This unique report from Lucintel will provide you with valuable information, insights, and tools needed to identify new growth opportunities and operate your business successfully in this market. This report will save hundreds of hours of your own personal research time and will significantly benefit you in expanding your business in this market. In today's stringent economy, you need every advantage that you can find.

Features of This Report:

To make business, investment, and strategic decisions, you need timely, useful information. This market report fulfills this core need and is an indispensable reference guide for multinational materials suppliers, product manufacturers, investors, executives, distributors, and many more that operate in this market.

Some of the features of "Opportunities for Composites in the European Construction Market 2013-2018: Trends, Forecast, and Opportunity Analysis" include:

Market size estimates for top composites applications in the European construction industry in terms of volume (M lbs) and \$M shipment.

Market size estimates for composite materials in European construction industry in terms of volume (M lbs) and \$ M shipment.

Market break down by different types of resins and fibers.

Porters Five Force Analysis for composites opportunities in European

construction market in terms of Supplier Power, Buyer Power, Barriers to Entry, Threat of Substitution and Rivalry.

Competitive analysis for various applications in terms of types of materials used such as the door market by various material types (composites, wood and steel).

Major driver and challenges

Trends (2007–2012) and forecast (2013-2018) for composite materials shipment in the European construction industry. Growth rates in composites shipment

Trends (2007–2012) and forecast (2013-2018) for composites applications in the European construction industry. Growth rates for various applications in volume (M lbs) and \$M shipment

Growth opportunities for emerging applications

Contents

1. EXECUTIVE SUMMARY

2. CONSTRUCTION INDUSTRY BACKGROUND AND CHARACTERISTICS

- 2.1: Construction industry overview
- 2.2: Characteristics of the European construction industry
- 2.3: Industry classification and application descriptions
 - 2.3.1: Doors
 - 2.3.2: Windows
 - 2.3.3: Rebar
 - 2.3.4: Utility pole
 - 2.3.5: Bridge deck
 - 2.3.6: Grating
 - 2.3.7: Cooling tower
 - 2.3.8: Bath
 - 2.3.9: Swimming pool
 - 2.3.10: Architectural applications
 - 2.3.11: FRP Panel
 - 2.3.12: Others
- 2.4: Price and weight distribution
 - 2.4.1: Ladder rail using pultrusion process
 - 2.4.2: Window lineal using pultrusion process
 - 2.4.3: Grating using pultrusion process

3. EUROPEAN CONSTRUCTION MARKET ANALYSIS-2012

- 3.1: Market concentration
- 3.2: Regional analysis
 - 3.2.1: Western Europe
 - 3.2.2: Eastern Europe
 - 3.2.3: Northern Europe
 - 3.2.4: Southern Europe
- 3.3: Market segmentation by application
 - 3.3.1: Doors
 - 3.3.2: Windows
 - 3.3.3: Rebar
 - 3.3.4: Utility Pole
 - 3.3.5: Bridge Deck

- 3.3.6: Grating
- 3.3.7: Cooling Tower
- 3.3.8: Bath
- 3.3.9: Swimming Pool
- 3.3.10: Architectural
- 3.3.11: FRP Panel
- 3.3.12: Others
- 3.4: European composite materials usage by application
- 3.5: Driving forces for the use of composites
- 3.6: Key requirements

4. COMPETITIVE ANALYSIS

- 4.1: Overview
- 4.2: Doors
 - 4.2.1: Market penetration
- 4.3: Windows
 - 4.3.1: Market penetration
- 4.4: Rebar
 - 4.4.1: Market penetration
- 4.5: Utility pole
 - 4.5.1: Market penetration
- 4.6: Bridge deck
 - 4.6.1: Market penetration
- 4.7: Grating
 - 4.7.1: Market penetration
- 4.8: Cooling tower
 - 4.8.1: Market penetration
- 4.9: Bath tub
 - 4.9.1: Market penetration
- 4.10: Swimming pool
 - 4.10.1: Market penetration
- 4.11: Architectural applications
 - 4.11.1: Market penetration
- 4.12: FRP panel
 - 4.12.1: Market penetration
- 4.13: Others
 - 4.13.1: Market penetration

5. EUROPEAN CONSTRUCTION MARKET TREND

5.1: Overview

5.2: Macroeconomic industry challenges in recent years

5.2.1: European housing

5.2.2: Credit crunch

5.3: Trends in the European construction market by applications

5.3.1: Doors

5.3.2: Windows

5.3.3: Rebar

5.3.4: Utility Pole

5.3.5: Bridge Deck

5.3.6: Grating

5.3.7: Cooling Tower

5.3.8: Bath

5.3.9: Swimming Pool

5.3.10: Architectural

5.3.11: FRP Panel

5.3.12: Others

5.4: Trends in the European construction market by materials

6. EUROPEAN CONSTRUCTION MARKET FORECASTS

6.1: Growth drivers for composites in the European construction market

6.2: Forecasts for European construction market by applications

6.2.1: Forecast for European doors

6.2.2: Forecast for European windows

6.2.3: Forecast for European rebar

6.2.4: Forecast for European utility pole

6.2.5: Forecast for European bridge deck

6.2.6: Forecast for European grating

6.2.7: Forecast for European cooling tower

6.2.8: Forecast for European bath

6.2.9: Forecast for European swimming pool

6.2.10: Forecast for European architectural applications

6.2.11: Forecast for European FRP panel

6.2.12: Forecast for European others

7.5 Forecasts for the European construction market by materials

7. MANUFACTURING PROCESS ANALYSIS

- 7.1: Overview of processes
- 7.2: Hand Lay-Up
- 7.3: Spray up
- 7.4: Compression molding
- 7.5: Pultrusion
- 7.6: Filament winding
- 7.7: VARTM
- 7.8: RTM

8. GROWTH OPPORTUNITIES AND EMERGING COMPOSITES APPLICATIONS

- 8.1: Growth markets
 - 8.1.1: Windows
 - 8.1.2: Doors
 - 8.1.3: Rebar
 - 8.1.4: Architectural application
- 8.2: Emerging applications
- 8.3: Emerging process and machinery
- 8.4: New materials development
