The phenolic resin market in global composite industry is expected to reach an estimated value of \$192 million by 2019. One of the major drivers of phenolic resin market in global composite industry is stringent regulations related to fire, smoke, and toxic gases emission in European mass transit industry. Increasing penetration of phenolic resin based composites in aircraft interior components is expected to drive the demand in future. Phenolic resin based composites in electric motor market is poised to grow by electricity saving opportunities offered by energy efficient electric motors. Increasing temperature under the hood due to scarce engine compartment space and exposure to engine fluids such as fuel, oil, and coolant create tougher environment. These problems are likely to increase the demand of fiber reinforced phenolic compound in under the hood components.

Lucintel, a leading global management consulting and market research firm, has analyzed the global phenolic resin market by application, by processing techniques, and by region; and has come up with a comprehensive research report, "Opportunities for Phenolic Resin in Global Composites Industry 2014-2019 Trend, Forecast, and Opportunity Analysis".
