## Abstracts

The future of the organic binder market looks promising with opportunities in construction, and paint & coating applications. The global organic binder market declined in 2020 due to the global economic recession led by COVID-19. However, the market will witness recovery in the year 2021, and it is expected to reach an estimated \$18.3 billion by 2026 with a CAGR of 4.1% from 2021 to 2026. The major drivers for this market are increasing demand for UV protection or heat and weather resistance, and a smooth ride surface in the road construction industry, accounts for a rise in the use of organic binder.

Emerging trends, which have a direct impact on the dynamics of the industry, include development of thin-bed technology for the construction industry.

A total of 97 figures / charts and 70 tables are provided in this 163-page report to help in your business decisions. A sample figure with insights is shown below.
