Abstracts

Background:

Construction is one of the largest segments within the Asian composites industry in volume shipment. This includes 12 major applications such as door, windows, rebar, utility pole, column shutter, grating, cooling tower, bathtub, swimming pool, architectural applications, FRP panel, and others. Today composite products are becoming far more commonplace. Rebar, decking, grating, door and window, swimming pool, FRP panel and many other applications are gaining great interest from consumers.

This report provides insight into composites in Asian construction by the end of 2007 and forecasts the market for 2008-2013. Learn what factors are impacting the construction market. The report extensively looks at recent industry trends, as well as future opportunities and threats, and represents an invaluable aid to sales and marketing professionals in, or interested in the industry. In addition, the report analyses market sizes and trends, market structures, key company shares for various segments. Construction markets by materials such as reinforcements and resins are discussed.

Lucintel has identified the best and worst performing markets in 2007. The worst performers in Asian construction were markets that were most closely associated with the slowdown in residential construction. Because of the slowdown in residential construction, specifically for exports into the U.S., these markets witnessed a significant decline from the previous year. The best markets were those associated with industrial or commercial applications, most of which have very little correlation to the movements in residential housing. As the global residential housing market continues to decline into 2008, it is important to know which sectors have continued to show strength despite the

global economic slowdown. In addition, knowing the top five segments, which are expected to grow at or above 10% a year for the next five years, can help to avoid some of the further weaknesses projected for some application segments. For the next five years, the Asian composite market in construction is expected to average over 8.9% per year, however, individual results vary greatly from -5.3% to 19.2% per year. According to Lucintel, construction applications in Asia are estimated to reach \$4.9 billion in 2013. Discover which applications will grow the fastest and how changing penetration trends from composites will affect the marketplace.

Material suppliers and product manufacturers need to continually stay abreast, critically analyze, and act fast to capture maximum market share and growth in various applications and markets. This 242 page condensed market report provides all of the latest critical issues concerning composite materials in construction, as well as market and applications related to the construction industry. This report is a must have for every company in the construction industry. In today's global economy, you need every advantage that you can find to keep you ahead in your business. Let us help to give you that edge.

Features of This Report:

To make any investment, business or strategic decisions, you need timely and adequate information. This market report fulfills this core need. This is an indispensable reference guide for composite material suppliers, product manufacturers, investors, researchers, engineers, distributors and many more, who are dealing with construction industry. Some of the features of this market report are:

Market size estimates for top 12 composites applications in the Asian construction industry in terms of volume (million lbs) and \$ million shipment.

Porters Five Force Analysis for composites opportunities in Asian construction market in terms

Competitive analysis for various applications in terms of types of materials used such as the Product M market by various material types.

Trends (2002 – 2007) and forecast (2008-2013) for composites applications in the Asian construction industry. Growth rates for various applications in volume (million lbs) and \$ million shipment.

Factors driving the growth (or Decline) of these composites applications in Asian construction market.

Growth Opportunities for Emerging Applications.

Market size estimates for composite materials in Asian construction industry in terms of volume (million lbs) and \$ million shipment. Market break down by different types of resins and fibers.

Trends (2002 – 2007) and forecast (2008-2013) for composite materials shipment in the Asian construction industry. Growth rates in composites shipment.

A total of 132 figures/charts and 50 tables presented in this report to help in your business plan.

Contents

1. EXECUTIVE SUMMARY

2. COMPOSITE APPLICATIONS

Overview of composite applications in construction industry.
Major construction products in different markets.
Features of composite products.

3. ABOUT THE CONSTRUCTION INDUSTRY

What is the Construction Industry
Characteristics of the Asian Construction Industry
Industry Background and Overview
Price and Weight Distribution

4. ASIAN COMPOSITES MARKET FOR CONSTRUCTION - 2007

Market overview.
Asian construction market breakdown by applications in terms of volume (million lbs) and also \$ million etc.
Asian construction market breakdown by materials such as reinforcements, resins, fillers in terms of volume (million lbs) and also \$ million etc.

5. COMPETITIVE ANALYSIS

Market penetration for composites in various applications.

6. ASIAN COMPOSITES MARKET TREND FOR CONSTRUCTION

Growth trends (2002-2007) in terms of \$ shipment and lbs shipment.
Trends in various applications.
Trends in materials shipment in terms of volume (million lbs) and also \$ million.

7. ASIAN COMPOSITES MARKET FORECAST FOR CONSTRUCTION

Market forecasts (2008-2013) in terms of \$ shipment and lbs shipment.
Forecast in various applications.

Forecast in materials shipment in terms of volume (million lbs) and also \$ million.

8. MANUFACTURING PROCESS ANALYSIS

Overview of construction manufacturing processes

Description of construction manufacturing processes

9. GROWTH OPPORTUNITIES AND EMERGING COMPOSITES APPLICATIONS

10. EMERGING MATERIALS FOR THE CONSTRUCTION INDUSTRY

List Of Figures

LIST OF FIGURES

Chapter 1 Executive Summary

Fig. 1.1: Composite materials shipment (\$ mill %) by application in the Asian construction market. Total shipment for 2007 was \$3,145 million.

Fig 1.2: Composite materials shipment (\$ mill) by application in the Asian construction market. Total shipment for 2007 was \$3,145 million.

Fig. 1.3: Composite materials shipment (mill. lbs %) by application in the Asian construction market. Total shipment for 2007 was 1,705 million lbs.

Fig. 1.4: Composite materials shipment (mill. lbs) by application in the Asian construction market. Total shipment for 2007 was 1,705 million lbs.

Fig. 1.5: Last 1 yr. % change (2006 – 2007) in composites applications market (\$ mill) for Asian construction. Total change (industry wide) for the year was 7.3%

Fig. 1.6: Last 5 yr. CAGR (2002 – 2007) in composites applications market (\$ mill) for Asian construction. Total CAGR (industry wide) last five years was 10.1%

Fig. 1.7: Next 1 yr. % change (2007 – 2008) in composites applications market (\$ mill) for Asian construction. Total change (industry wide) for next year is 2.0%

Fig. 1.8: Composite material shipment (\$ mill) by application in the Asian construction market in 2008. Total shipments are estimated at \$3,209 million.

Fig. 1.9: Next 5 yr CAGR (2008 – 2013) in composites application market (\$ mill) for Asian construction. Total change (industry wide) for next 5 years is 8.9%

Fig. 1.10: Composite material shipment (\$ mill) by application in the Asian construction market in 2013. Total shipments are estimated at \$4,193 million

Fig. 1.11: Porter's Five Forces model for the composite market in construction for Asia

Chapter 2 Composite Applications
