The operating technologies in automotive tail gate have undergone significant change in recent years, with manual *tailgate* controlled tailgates. The rising wave of new technologies, such as hand-free tailgate, hydraulic operated tailgate, and power operated tailgate are creating significant potential for automotive tail gate in various vehicle platforms as it offers access *to* the vehicle boot area.

In this market, various operating technologies such as manual, hydraulic operated and power operated tailgate are used in passenger cars, light commercial vehicles, and heavy commercial vehicles. Increasing use of lightweight materials, rise in demand for luxury vehicles, and consumer concern over the vehicle esthetic appearance are creating opportunities for various automotive tail gate technologies.

This report analyzes technology maturity, degree of disruption, competitive intensity, market potential, and other parameters of various technologies in the automotive tail gate market. Some insights are depicted below by a sample figure.
