The technologies in dental implant and prosthetic have undergone significant change in recent years, with carved seashells and/or stones t%li%zirconium based dental implant. The rising wave of new material technology such as zirconium based implant is creating significant potential for advanced dental implant and prosthetic in various medical platforms due t%li%its outstanding mechanical properties, high biocompatibility and a high resistance t%li%scratching and corrosion

In the dental implant and prosthetic market, various material technologies such as titanium, zirconium, ceramic, polymer, and biomaterials are used in the endosteal, subperiosteal, transosteal, and intramucosal implants applications. Growing geriatric population, rising incidence of dental diseases, and increasing demand for cosmetic dentistry are creating new opportunities for various dental implants and prosthetic technologies.

This report analyzes technology maturity, degree of disruption, competitive intensity, market potential, and other parameters of various technologies in the dental implant and prosthetic market. Some insights are depicted below by a sample figure. For more details on figures, the companies researched, and other objectives/benefits on this research report, please download the report brochure.
