Lucintel forecasts that services will remain the largest offering segment over the forecast period, as there is frequent requirement for installation (installation of HVAC, electrical and lighting, firefighting, and other systems), design and engineering, project management and execution, life cycle, and maintenance services.

Within this market, railway tunnels will remain the largest tunnel type segment over the forecast period because increasing construction of subway and railway tunnels and rising incidents of accidents in railway tunnels have prompted several railway network authorities to automate their railway tunnel systems to minimize manual management of tunnels.

Europe will remain the largest region, and it is also expected to witness the highest growth over the forecast period due to the well-established manufacturing industry, increasing demand for public transport in most cities, and presence of several mountain ranges in the region.
