Abstracts

3D animation uses computer graphics to make objects look like they're moving in 3-dimensional space. Artists use 3D modeling software to build the objects. Next comes rigging, a virtual representation of an object or character's skeleton. Animators pose the rig at strategic points so it appears to move. Newer methods of animation involve motion capture, which records an actor's live movements for digital animation.

This report elaborates the market size, market characteristics, and market growth of the 3D Animation Software industry, and breaks down according to the type, application, and consumption area of 3D Animation Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for 3D Animation Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
