Abstracts

The full name of AOI is automatic optical inspection, which is based on the optical principle to detect common defects encountered in welding production. AOI is a new type of testing technology emerging, but it has developed rapidly. Many manufacturers have introduced AOI testing equipment. When it is automatically detected, the machine automatically scans the PCB through the camera, collects images, and compares the solder joints of the test with the qualified parameters in the database. After image processing, the defects on the PCB are checked, and the defects are displayed/marked by the display or the automatic sign. Come out for repair by maintenance staff. Area of interest The name of the study area in some software for remote sensing and geographic information systems. Use high-speed and high-precision vision processing technology to automatically detect various misplaced errors and soldering defects on the PCB. PCB boards range from fine pitch high density boards to low density large size boards and offer on-line inspection solutions to increase productivity and weld quality. By using AOI as a tool to reduce defects, find and eliminate errors early in the assembly process to achieve good process control. Early detection of defects will avoid sending bad boards to subsequent assembly stages, and AOI will reduce repair costs and will avoid scrapping unrepairable boards.

This report elaborates the market size, market characteristics, and market growth of the 3D Automated Optical Inspection (AOI) industry, and breaks down according to the type, application, and consumption area of 3D Automated Optical Inspection (AOI). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
