## Abstracts

3D printing is an innovative way of structuring an object or creating layer by layer. A design of the product is developed into the computer and the same system is integrated with the machine. Small granules of the raw materials are fed into the machines that are further released by the robot arm to form the 3D shape. The similar technology is applied for creating food products. 3D technology printers not only help in the formation of the 3D shape but also deliver the food with eye pleasing taste and most importantly the taste.

This report elaborates the market size, market characteristics, and market growth of the 3D Printing Food industry, and breaks down according to the type, application, and consumption area of 3D Printing Food. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
