## Abstracts

3D printing resin is a liquid solution. This liquid consists essentially of a mixture of different monomers and oligomers-the short chain consists mainly of carbon atoms and some functional groups. In this state, they will remain liquid. The goal is to use these monomers and oligomers to create longer chains that will eventually form our 3D printed hard plastic material.

This report elaborates the market size, market characteristics, and market growth of the 3D Printing Resins industry, and breaks down according to the type, application, and consumption area of 3D Printing Resins. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for 3D Printing Resins in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
