Abstracts

3D reconstruction technology is a process used for capturing the shape and appearance of real objects. This process can be executed either by using active or passive methods. If the model changes its shape in time, this is referred to as non-rigid or spatio-temporal reconstruction.

This report elaborates the market size, market characteristics, and market growth of the 3D Reconstruction Technology industry, and breaks down according to the type, application, and consumption area of 3D Reconstruction Technology. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for 3D Reconstruction Technology in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
