Abstracts

A 3D scanner is a scientific instrument used to detect and analyze the shape (geometry) and appearance data (such as color, surface albedo, etc.) of objects or environments in the real world. The collected data is often used to perform 3D reconstruction calculations to create a digital model of the actual object in the virtual world.

This report elaborates the market size, market characteristics, and market growth of the 3D Scanners industry, and breaks down according to the type, application, and consumption area of 3D Scanners. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for 3D Scanners in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
