Abstracts

Abrasive blasting equipment makes surface preparation much easier than grinding or manual preparation. The use of blast equipment is more convenient as it is portable and easy to carry and work within limited spaces. The most commonly available blasting equipment is sand blasters that utilize silica sand. Other blast media include coal slags, garnet, nickel and copper slags, glass beads, steel grit, dry ice, plastic beads, corn or wheat starch, crushed nut shells, and sodium bicarbonate. Most of these materials are blasted using both dry and wet media.

This report elaborates the market size, market characteristics, and market growth of the Abrasive Blasting Equipment industry, and breaks down according to the type, application, and consumption area of Abrasive Blasting Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Abrasive Blasting Equipment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
